**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-23 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are:

Claims 1, 7, 10, 13 and 17 and 20 state “dividing the display panel into at least one block...” the term “one block” is a singular term making it indivisible into multiple entities. Proper corrections are required.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Klein (US Pat. No. 6,401,209 B1).

In regard to claims 1-23, Klein discloses a method for driving a display device having a display panel, the method comprising the steps of: confirming whether display data applied to

the display panel are uniformly maintained for a predetermined time; dividing the display panel into blocks when the display data are uniformly maintained for a predetermined time (see the abstract). Furthermore, the method includes detecting whether a person is located proximate the computer, and causing the computer to execute a screen saver program responsive to detecting that the person is not located proximate the computer, or detecting whether light, sound, or electromagnetic energy broadcast adjacent the computer is reflected from a person proximate the computer (see col. 2, lines 32-49).
